

A New Checklist Tool to Enhance Documentation, Standardization, and Training for Program Officers

National Institute on Drug Abuse
Supervised by Susan Wright and Roger Little
Division of Neuroscience and Behavior

NINA BERNICK
Yale University
Applied Mathematics

PROJECT BACKGROUND & GOALS

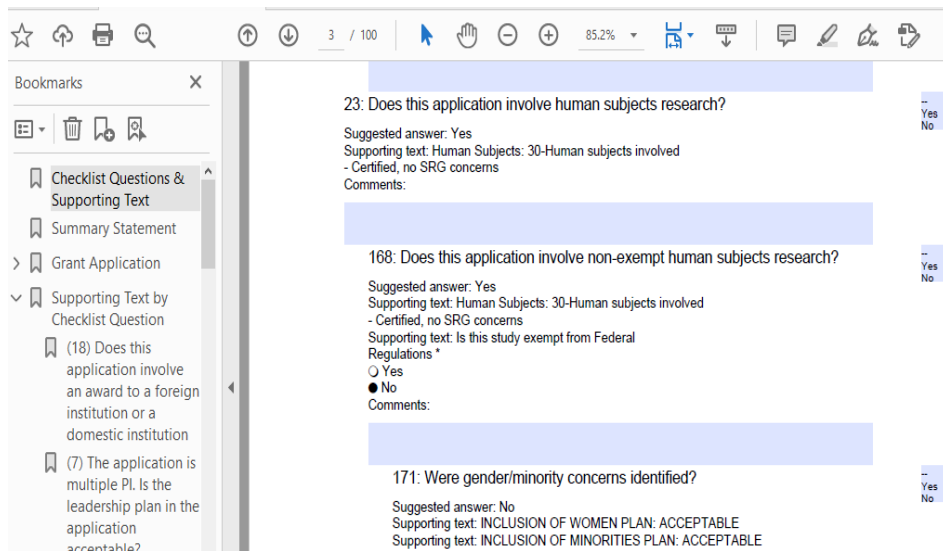

- Program Officers (POs) fill out checklists for each application in their portfolio of extramural research grants
 - Facilitate easier searching through up to 100 pages or more of grant documents
 - Provide documentation of the textual evidence on which a PO based their answers
 - Provide standardized training for checklist completion
- Goal: Develop a tool to organize, standardize, and document the process of filling out a program checklist that can also be used for training.

PROCESS

- Iterative development incorporating feedback from Program Officers and policy experts
- New features progressively implemented – table of contents, interactive links, comment fields
- Used Python + PDF processing libraries to write tool to process grant documents, perform simple text searches, and compile aggregate output PDF

PRODUCT

- Final product includes:
 - All pieces of supporting textual evidence for each question
 - Interactive table of contents
 - Documentation of PO comments and answers
 - Optional semi-automated answer suggestion feature

IMPACT

- Semi-automation feature shows 96% accuracy in preliminary analysis
- Efficiency gains of 5 – 10 minutes per grant **X** up to 100+ grants per portfolio
- Robust documentation of textual evidence for checklist questions
- Standardized checklist answering process
- Standardized training tool for new POs

What's next? Large scale testing, expansion of answer suggestion capabilities, and hopefully NIH-wide integration.
